SUMMARY

Senior Node.js/TypeScript engineer for backend-heavy product systems, currently on a B2B contract building secure, regulated platform services and available for additional remote EU engagements.

I help teams reduce delivery risk in migrations, data-heavy APIs, authentication, serverless microservices, and tested React/Node systems, with measured work across fintech, energy, real estate, and payments platforms.

Recent proof includes cutting RWE exports from 45 minutes to 12, improving API response times by 65%, and shipping inside ImmoScout24's fully tested distributed platform.

EXPERIENCE

Bitpanda Remote

Sep 2025 - Present

- Building authentication services for an EU-regulated platform serving institutional clients
- Designing serverless microservices on AWS (Lambda) for secure transaction flows
- Extending account-management capabilities to support compliant institutional transaction patterns

ImmoScout24 AT

Aug 2024 - Jun 2025

- Contributed to search and listing flows for one of Austria's leading real-estate platforms, working inside a fully tested distributed system
- Integrated Iterable marketing automation and supported SEO-focused changes in collaboration with product and platform teams
- Worked across React, Node.js, AWS, and MongoDB services while matching Scout24's test coverage and review expectations
- Contributed to platform stability and user-facing improvements during active product delivery

RWE DE

Sep 2022 - Jul 2024

- Helped migrate legacy Java components toward NestJS services for an energy-market data platform, improving maintainability for a small delivery team
- Built and optimized MongoDB-backed data filtering for 15,000+ daily energy market queries
- Introduced e2e testing practices early in the migration so replacement work could be shipped with confidence
- Implemented parallel processing with Worker Pools for large dataset operations, reducing data export time from 45 minutes to 12 minutes
- Improved API response times by 65% through microservices architecture, enabling faster energy trading operations and better user experience
- Collaborated with 4-person development team and provided technical guidance on Node.js architecture decisions

AT A GLANCE

- Long-term B2B / contract
- Remote EU / Romania
- Available: Immediate
- Europe/Bucharest timezone
- EU Citizen
- Fluent English (C1)

FRONTEND

- React
- TypeScript
- Redux
- Tailwind
- SEO-sensitive UI

BACKEND

- Node.js
- TypeScript
- NestJS
- Hapi.js
- API design

DATABASES

- MongoDB
- PostgreSQL
- MySQL
- Redis
- Query profiling

CLOUD & DEVOPS

- AWS
- Azure
- Docker
- CI/CD
- GitHub Actions

TESTING & QUALITY

- E2E testing
- Integration tests

Applied Blockchain Remote

Mar 2022 - Aug 2022

- Built React frontend features for a fintech platform that let users pledge funds as collateral to tokenize and finance contracts
- Delivered meaningful frontend work across the product surface in a small, fast-moving team
- Supported backend development on authentication and CRUD services

Endava RO

Sep 2019 - Jul 2021

- Built document conversion system using Node.js, AWS S3, and Lambda, processing 2,000+ scientific papers daily for academic research platform
- Developed React frontend for paper submission and tracking, with optimized rendering to handle large document collections and collaborative workflows
- Mentored 2 junior developers in React best practices and Node.js architecture, helping them integrate successfully into the development team
- Created e-commerce checkout system using React and TypeScript, supporting multiple payment methods including Klarna and traditional cards

WIP Romania RO

Jul 2018 - Sep 2019

- Developed mobile wallet application for e-commerce platform using MeteorJS and React, enabling customers to manage account funds and make payments
- Built real-time balance updates and transaction history using WebSocket connections, providing instant feedback on account activity
- Created deposit and withdrawal interfaces with custom React components, streamlining the fund management process for users
- Implemented efficient state management for concurrent transactions, maintaining system stability during peak usage periods

DeverSoft RO

Oct 2013 - Mar 2015

- Developed restaurant management frontend using JavaScript and Java backend integration, supporting order tracking and table management
- Created user-friendly interface that reduced staff onboarding time and improved daily restaurant operations
- Implemented WebSocket connections for real-time updates between kitchen and service staff, improving communication workflow

- TDD
- Code review
- Production safety

PERFORMANCE

- Node profiling
- Worker threads
- Worker pools
- Export pipelines
- API latency

SELECTED PROJECTS

Silver Bullet Trade-Infra Ops

Automated futures-trading infrastructure (in development): strategy engine, backtesting engine, and live performance statistics.

Python · PostgreSQL · Redis · React

EDUCATION

BS in Computer Science, 2017

Babes Bolyai University
Cluj-Napoca, Romania
