Summary

I am a senior backend engineer with around 7 years of commercial Node.js and 5+ years of TypeScript, working with European product teams in regulated fintech, energy data, and large-traffic marketplaces. I design and build Node.js / TypeScript services on NestJS, Fastify, and GraphQL, and I'm comfortable in the React front-ends that consume them.

My work has focused on high-volume operational flows, Java-to-NestJS migrations backed by integration and E2E tests, and hands-on API performance work—including MongoDB query profiling that cut key response times by 65% and a Node.js Worker-Pool refactor that reduced a 45-minute export to 12 minutes.

I ship through CI/CD on Azure DevOps and GitHub Actions, and I'm familiar with containerized delivery, Kubernetes, and related monitoring. I use GitHub Copilot and Claude Code day-to-day for boilerplate and debugging support.

I collaborate well in cross-functional Agile Scrum teams and own features end-to-end. I've delivered for regulated fintech (Bitpanda), energy operations (RWE), large-traffic marketplaces (ImmoScout24), and enterprise document/payment platforms (Endava).

Areas of expertise

- **Web Development:** Node.js, TypeScript, JavaScript
- **Backend Frameworks:** NestJS, Fastify, Express.js
- **Frontend:** React, Redux, Next.js
- **APIs:** REST (OpenAPI / Swagger), GraphQL
- **DevOps:** Azure DevOps pipelines, GitHub Actions, Docker, AWS (Lambda, S3, SQS, serverless); Kubernetes / AKS, Helm, Terraform
- **Databases:** MongoDB, PostgreSQL, MySQL, Redis; query profiling
- **Real-time & Integrations:** WebSockets, third-party API integrations, marketing automation (Iterable)
- **Testing:** Jest, Vitest, Playwright, integration + E2E + TDD
- **Monitoring:** Grafana, Prometheus, Datadog
- **AI Tooling:** GitHub Copilot, Claude Code
- **Project Environments:** Enterprise, regulated industries, late-stage startups
- **Soft skills:** Cross-functional collaboration, mentoring, code review, architectural thinking

Industries

- Regulated Fintech / Digital-Asset Custody
- Energy & Utilities
- Real Estate / Marketplaces
- Payments / E-commerce
- Enterprise SaaS

Work experience

Senior Backend Engineer	
Bitpanda Sep 2025 – Jun 2026	• Backend feature ownership on a bank-facing digital-asset custody platform used by institutional clients • Owned the crypto address-book service end-to-end: API contract design, data model, validation, tests, and AWS deployment • Introduced backend integration-testing patterns later adopted by the team • Strengthened authentication and authorization across services • Tech Stack: Fastify, GraphQL, TypeScript, Node.js, PostgreSQL, AWS (Lambda, serverless), GitHub Actions, GitHub Copilot, Claude Code
Senior Full Stack Engineer	
ImmoScout24 Aug 2024 – Jun 2025	• Integrated Iterable marketing automation into React and Node.js flows for targeted lifecycle messaging • Shipped search, listing, and SEO improvements in a mature AWS + MongoDB marketplace platform • Matched the platform's established review, integration-test, and production-safety standards • Tech Stack: React, Redux, Node.js, Express.js, TypeScript, MongoDB, Redis, AWS, GitHub Actions, Iterable, GitHub Copilot, Claude Code

Full Stack Engineer

RWE

Sep 2022 – Jul 2024

- Led incremental Java → NestJS microservice migration for an energy-market operational data platform
- Profiled MongoDB aggregations serving 15,000+ daily queries; cut key API response times by 65%
- Refactored CPU-intensive exports into a Node.js Worker-Pool architecture, reducing runtime from 45 to 12 minutes
- **Shipped through Azure DevOps CI/CD pipelines into an AKS cluster; worked with the existing Helm and Terraform config**
- **Tech Stack: NestJS, Node.js, TypeScript, React, Java (legacy), MongoDB, Redis, Azure DevOps, AKS, Helm, Terraform, Grafana, Prometheus, GitHub Copilot**

Independent

Aug 2021 – Aug 2022

Independent · Projects & Professional Development

- Worked on independent software projects and professional development before returning to long-term product work at RWE.

Full Stack Engineer

Endava

Sep 2019 – Jul 2021

- Built a Node.js pipeline processing 2,000+ scientific papers daily on AWS S3 and Lambda
- Delivered React submission and tracking flows for large document collections
- Shipped TypeScript checkout support integrating Klarna and card-payment providers
- **Mentored two junior developers on Node.js, TypeScript, and testing patterns**
- **Tech Stack: Node.js, TypeScript, React, Redux, Express.js, MongoDB, PostgreSQL, AWS (S3, Lambda, SQS), GitHub Actions**

Education

Computer Science, Babeş-Bolyai University, Romania
2014 – 2017

- Bachelor's degree in computer science

Outside of work

Outside work, I spend time with my family, get outdoors, train, and produce music. I also build small side projects to understand new ideas properly before I trust them in production.

Selected relevant project experience

Bitpanda /
Regulated Fintech

Remote (Austria)

Enterprise

Institutional Digital-Asset Custody Platform

Role: Senior Backend Engineer

Key responsibilities:

- Own the crypto address-book backend end-to-end: API contract, data model, validation, error handling, retries, structured logging
- Design microservices with clean domain boundaries and observability (logs, metrics, structured events)
- Strengthen authentication and authorization across the service mesh
- Introduce integration-testing patterns (Testcontainers-style) that the team adopted for new services
- Ship through GitHub Actions CI/CD: build, unit + integration, quality gates, staged deploys to AWS
- Use GitHub Copilot and Claude Code day-to-day for boilerplate and debugging
- Cross-functional Agile Scrum team; participate in code reviews and onboard new joiners

- **Languages:** TypeScript, JavaScript
- **Frameworks:** Fastify, GraphQL, Node.js
- **Data Storage:** PostgreSQL
- **Documentation:** OpenAPI (OAS3), GraphQL Schema
- **Tools:** git, VSCode, Docker
- **Cloud/DevOps:** AWS (Lambda, serverless), GitHub Actions
- **AI Tooling:** GitHub Copilot, Claude Code

RWE / Energy &
Utilities

Remote (Germany)

Enterprise

Energy-Market Operational Data Platform

Role: Full Stack Engineer (backend-heavy)

Key responsibilities:

- Lead incremental Java → NestJS microservice migration using a strangler-fig pattern, with integration and E2E test harnesses
- Profile MongoDB aggregations serving 15,000+ daily queries; reduce key API response times by 65%
- Move CPU-intensive export workloads into a Node.js Worker-Pool architecture: 45 min → 12 min while keeping API responsive
- Ship service changes through Azure DevOps CI/CD pipelines into AKS; work with existing Helm and Terraform config
- Use Grafana and Prometheus during incidents to trace issues back to service changes
- Use GitHub Copilot for boilerplate and refactoring; document services via NSwag / OpenAPI
- Collaborate with QA, architects, POs, and stakeholders; contribute to code review and mentor newer engineers

- **Languages:** TypeScript, JavaScript, Java (legacy)
- **Frameworks/Libraries:** NestJS, Node.js, React
- **Data Storage:** MongoDB, Redis
- **Documentation:** OpenAPI (OAS3), NSwag
- **Async patterns:** HTTP + scheduled jobs (cron)
- **Tools:** git, JetBrains IDEs, Docker
- **Cloud/DevOps:** Azure DevOps, AKS, Helm, Terraform
- **Monitoring:** Grafana, Prometheus
- **AI Tooling:** GitHub Copilot
- **Project Management:** JIRA

ImmoScout24 /
PropTech

Remote (Austria /
Germany)

Enterprise

Large-Traffic Marketplace Platform

Role: Senior Full Stack Engineer

Key responsibilities:

- Integrate Iterable marketing automation into React and Node.js flows for targeted lifecycle messaging
- Ship search, listing, and SEO improvements across React and Node.js in a mature AWS + MongoDB environment
- Match established review, integration-test, and production-safety standards inside a distributed system
- Turn lifecycle-messaging requirements from product / design / analytics into concrete backend contracts
- Use GitHub Copilot and Claude Code for refactoring and test scaffolding in a large monorepo
- Follow the Agile Scrum methodology

- **Languages:** TypeScript, JavaScript
- **Frameworks/Libraries:** React, Redux, Node.js, Express.js
- **Data Storage:** MongoDB, Redis
- **Documentation:** OpenAPI (OAS3)
- **Third-party:** Iterable (marketing automation)
- **Tools:** git, VSCode, Docker
- **Cloud/DevOps:** AWS, GitHub Actions
- **AI Tooling:** GitHub Copilot, Claude Code

Enterprise

Enterprise Document Processing & Payments

Role: Full Stack Engineer

Key responsibilities:

- Build a Node.js pipeline processing 2,000+ scientific papers daily on AWS S3 and Lambda
- Deliver React submission and tracking flows for large document collections and editorial workflows
- Ship TypeScript checkout support integrating Klarna and card-payment providers, validated against real payment sandboxes
- Mentor two junior developers on Node.js, TypeScript, and testing patterns
- Contribute to GitHub Actions CI/CD flow for build, test, and controlled deployment to AWS
- Follow the Agile Scrum methodology
- **Languages:** TypeScript, JavaScript
- **Frameworks/Libraries:** React, Redux, Node.js, Express.js
- **Data Storage:** MongoDB, PostgreSQL
- **Documentation:** OpenAPI (OAS3)
- **Messaging:** AWS SQS
- **Third-party:** Klarna, card-payment providers
